

Covision

Symptoms

Most common symptoms:

- fever
- dry cough
- tiredness

Less common symptoms:

- aches and pains
- sore throat
- diarrhoea
- conjunctivitis
- headache
- loss of taste or smell
- a rash on skin,
- discolouration of fingers or toes.

Serious symptoms:

- Difficulty breathing
- shortness of breath
- Chest pain or pressure
- loss of speech movement

Let's see precautions:

Covision

What is covid ?

Coronavirus disease (COVID-19) is an infectious disease caused by a newly discovered coronavirus.

The COVID-19 virus spreads primarily through droplets of saliva or discharge from the nose when an infected person coughs or sneezes.

Protect yourself and others from infection by washing your hands or using an alcohol based rub frequently and not touching your face.

Want to know about it's symptoms ?

Symptoms

Covision

Precautions:

- Clean your hands often.
- Use soap and water, or an alcohol-based hand rub.
- Maintain a safe distance from anyone who is coughing or sneezing.
- Wear a mask when physical distancing is not possible.
- Don't touch your eyes, nose or mouth.
- Cover your nose and mouth with your bent elbow or a tissue when you cough or sneeze.
- Stay home if you feel unwell.
- If you have a fever, cough and difficulty breathing, seek medical attention.

Confirmed Cases by Country/Region/Sovereignty

Rising covid cases amid oxygen shortage

Covid-19 cases are growing in many countries around the world, but some are hit harder than others. India has recorded the highest one-day tally of new Covid-19 cases anywhere in the world - and the country's highest number of deaths over 24 hours, second only to the US. A number of people have died while waiting for oxygen.

India is struggling to cope with the soaring numbers - it

What do you know about Covaxin?

Covaxin is an inactivated vaccine which means that it is made up of killed coronaviruses, making it safe to be injected into the body.

Bharat Biotech, a 24-year-old vaccine maker with a portfolio of 16 vaccines and exports to 123 countries, used a sample of the coronavirus, isolated by India's National Institute of Virology.

When administered, immune cells can still recognise the dead

'Double Mutant' Covid variant found in India

According to Dr Rakesh Mishra, the Director of Center For Cellular & Microbiology, where the 'double mutant' variant was first sequenced, n. Like all viruses, the coronavirus keeps changing in small ways as it passes from one person to another. However, most are insignificant and do not cause any change in their

A vaccine is a biological preparation that provides active acquired immunity to a particular infectious disease. A vaccine typically contains an agent that resembles a disease-causing microorganism and is often made from weakened or killed forms of the microbe, its toxins, or one of its surface proteins. The agent stimulates the body's immune system to recognize the agent as a threat, destroy it, and to further recognize and destroy any of the microorganisms associated with that agent that it may encounter in the future. Vaccines can be prophylactic to prevent or ameliorate the effects of a future infection by a natural or
